

Websites from Scratch

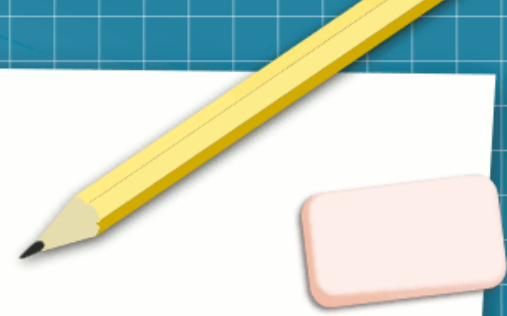

What is a Website

- A website is a collection of pages(files) stored on a server on the internet.
- A page can be made up of a couple of files and reference other files
- Pages can contain Video,Images,Audio etc

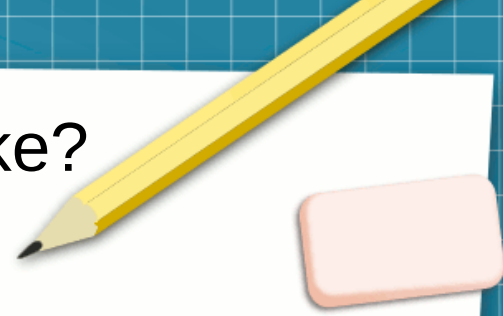

How do websites work?

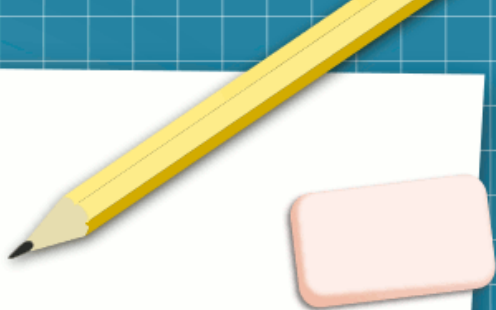

- 1) You use a browser like Chrome, Firefox, Safari
- 2) Navigate to a web address (URL - uniform resource locator),
This is the address of the web servers FQDN
- 3) Your browser requests a page using a 'GET' request
- 4) The server then replies with the page you requested
- 5) Your browser then renders the page.

What does a webpage actually look like?

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
  <link />
</head>
<body>
  <p> HELLO WORLD </p>
</body>
</html>
```

HELLO WORLD

Early websites from the 90's

- <https://info.cern.ch/hypertext/WWW/TheProject.html> This was the first website from Aug 6th 1991
- <https://www.spacejam.com/1996/>
- <https://web.archive.org/web/19990429045319/http://hampsterdance.com/>

Original NASA website - 1997

The NASA Homepage

- [Welcome](#) - This is a good place to begin your journey. Start by reading a letter from NASA Administrator, Dan Goldin, or NASA's Strategic Plan. Check out the User Tips page to find the helper applications you will need to get the most out of what we have to offer.
- [Today@NASA](#) - If you've read about NASA recently or seen something on TV, this is place to go for links to more details about breaking news. You can find the most recent Hubble Space Telescope Images, links to the Shuttle Web and the latest news releases. [This site is extremely busy, please be patient.]
- [NASA Organization](#) - A list of the offices at NASA Headquarters with links to their Web sites. Below this list, you'll find an extensive subject index of NASA Web sites.
- [Questions and Answers](#) - Have you ever wondered where you can order NASA photographs? Or how to become an astronaut? Or how to see a launch? This is the place to go to find the most commonly sought information about the U.S. space program.
- [NASA Centers](#) - Most of NASA's work is done at the agency's field centers. Here you'll find links to their Home Pages.
- [Go To](#) - Links back to the NASA Organization, the NASA Centers, other nations' space agencies and other U.S. federal agencies.
- [Gallery](#) - Video, audio clips and still images are here for the downloading.
- [Aeronautics](#) - An overview of NASA's aeronautics research and links to related Webs.

Amazon - 1999

The screenshot shows the Amazon.com homepage as it appeared in 1999. The browser window has a standard Mac OS interface with red, yellow, and green window control buttons. The Amazon logo is at the top left, with navigation links for 'YOUR ACCOUNT', 'HELP', and 'SELL ITEMS' to the right. A horizontal menu bar contains categories: WELCOME, BOOKS, MUSIC, VIDEO, TOYS & GAMES, ELECTRONICS, e-CARDS, AUCTIONS, and zSHOPS. Below this is a secondary menu with 'SEARCH VIDEO', 'BROWSE GENRES', 'TOP SELLERS', 'NEW & FUTURE RELEASES', 'DVD', 'KIDS & FAMILY', and 'AWARDS & RECOMMENDATIONS'. The date 'Tuesday, November 2, 1999' is displayed on the right.

Video New Releases

Saving Private Ryan

No recent war film has been quite as shattering as *Saving Private Ryan*--its grunt's-eye view of combat is some of the most gripping and emotional filmmaking ever. The video release also comes with a separate making-of documentary feature.

Recently Featured Videos:

- [Pinocchio](#)

- [Saturday Night Live: The Best of Adam Sandler](#)

DVD

The Thin Red Line

Terrence Malick's meditation on World War II, *The Thin Red Line*, marked the end of the director's 20-year hiatus. The film's lyrical pace is a complement to the savage action of *Saving Private Ryan*, but it's just as true a depiction of the horrors of war. In [DVD](#)

Google - 1998

HTML

- HTML – HyperText Markup Language, This is the code/language to make websites
- It tells Chrome,Firefox,Safari how to display the webpage

HTML

- HTML Language use Tags or Elements to define the page, Most tags come in pairs and start with `<TAG>` something here `</TAG>` to end.
- `<h1>` is a Heading tag used to create headings, there is also h2,h3 up to h6
- `<p>` is paragraph text
- `<img>` is an image tag, this is where you can reference an image
- `<a>` this is a link tag, to link one page to another

HTML Attributes

- HTML Attributes are extra information given to tags
- These can be how big something should be, what colour it should be, where a link goes.

- Some examples

```
<a href="https://google.com" >Visit Google</a>
```

the `href=" "` is the attribute

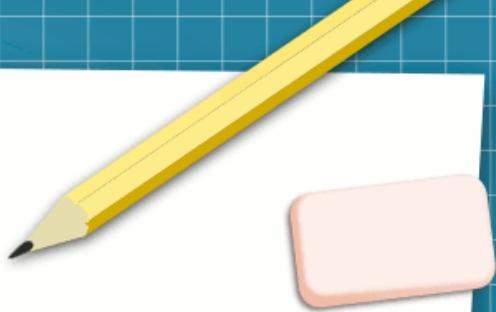

```

```

here the img tag has `src`, `width` and `height` attributes

Creating your first webpage

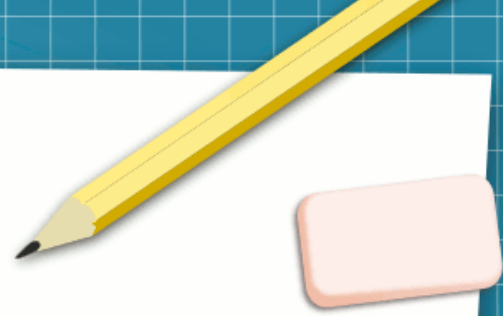

- Open text editor
- Type the text opposite
- Save as
- Name `index.html`
- Select file type as all or it may name it as index.html.txt or something.
- double click on your file and it should open your browser and it should look like...

```
<!DOCTYPE html>
<html>
<head>
<title>My First Page</title>
</head>
<body>

<h1>This is a Heading</h1>
<p>This is a paragraph.</p>

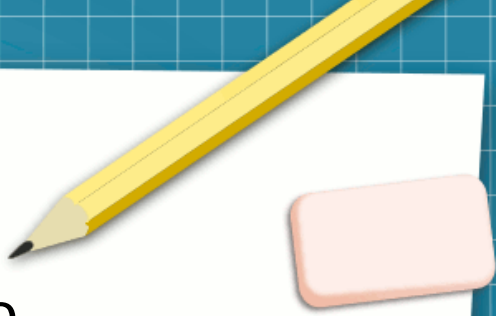

</body>
</html>
```

This is a Heading

This is a paragraph.

Creating your first webpage alternative

- Open <https://www.w3schools.com/html/> in Chrome
- Scroll down and click 'Try it Yourself'

Example

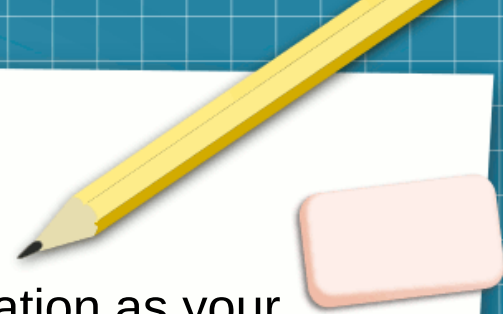

```
<!DOCTYPE html>
<html>
<head>
<title>Page Title</title>
</head>
<body>

<h1>This is a Heading</h1>
<p>This is a paragraph.</p>

</body>
</html>
```

Try it Yourself »

Inserting images

- Download a picture from the internet and put it in the same location as your index.html
- name it something easy
- edit your index.html and add

```

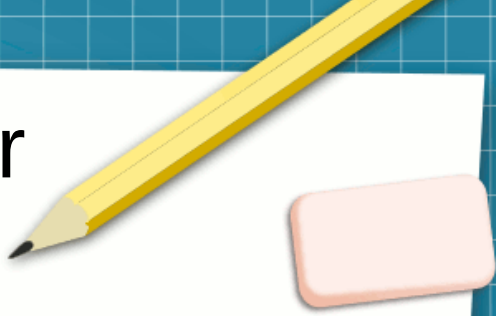

```

- Save and then refresh the page in your browser, this will re-render the page.
- The image can also be a web link to another image

```

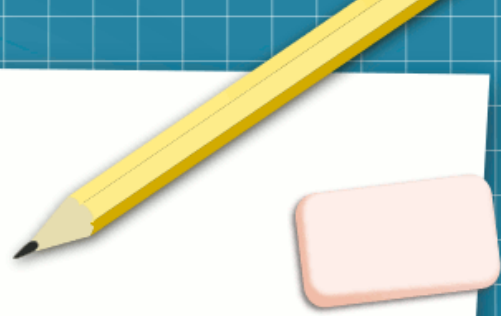

```

Changing background Colour

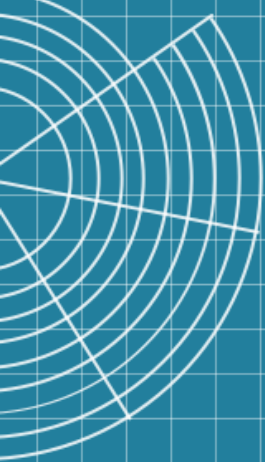

- Back in your index.html
change
`<body>`
to
`<body style="background-color:blue;" >`
- Refresh your page to see the difference
- There are 140 colour names that are supported out of the box by browsers
https://www.w3schools.com/colors/colors_names.asp
- You can also colour by using HEX value colours
https://www.w3schools.com/colors/colors_picker.asp
- You can also use RGBA (Red Green Blue Alpha) or HSL (Hue Saturation Lightness)

Changing Text Colour

- Within your index.html
- Find the `<p>` element
- Change it so it looks like
`<p style="color:red;" ... </p>`
- Refresh your page to check out the changes
- Next try
`<p style="color:rgba( 255,100,50,1);" ... </p>`
